Avoiding one of the most insidious cancer threats lurking in the air (!)

Consisting of radioactive particles, which can occur anywhere anytime. But we are unable to recognize them.

But our new high-tech scanner does **JUST THIS** And will alarm you by your mobile phone.

Our research team aimed at the detection of these carcinogen particles in the air, to gather them qualitatively and to warn immediately, when they appear.

This new protection system is ready to be acquired for commercial as well as personal use.

The task: developing a scanning device, which is scanning the environment permanently and automatically, evaluating the result of the scan by artificial intelligence (ai) and alarming you by your mobile phone in case of danger.

visualized principle of the 360° scan process - this happens inside the sensor fully electronically without moving parts >>:

Where do these life-threatening particles = radionuclides come from?

There are countless sources. Natural ones, but above all man-made ones, which are extremely dangerous. These sources can also be very far away and yet these radionuclides appear immediately in large quantities everywhere.

Possible causes: daily incidents in nuclear facilities, terrorism, industrial accidents, nuclear transport, nuclear medicine, military and weapons, sabotage, targeted poison attacks on individuals, groups, states, the legacy of Chernobyl, Fukushima and many nuclear tests, etc., etc., etc.

## What are radionuclides?

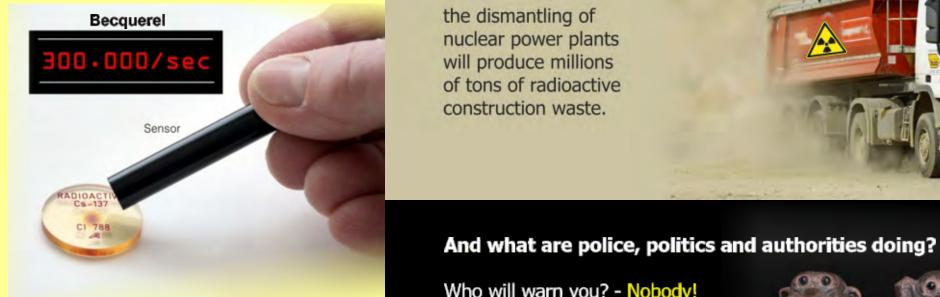

They are unimaginably tiny particles (atoms) which permanently emit extremely dangerous energy impulses

From the small brown spot in the middle per second 300,000 "projectiles" are emitted which can be extremely destructive in living organisms.

They can occur in food and breathing air

These particles are not perceptible. We have no sense organ for it.

Cancer - much later - shows, that they entered the body.

# Then these particles remain

destructive energy.

Cancer is coming up as if

permanently bombarded

ne deadly danger of cancer comes from the so-called incorporation of these particles.

Incorporation means the absorption of radionuclides with breathing air and food into the body.

there in the organs. And then they bombard cells and body tissues permanently with their

Who will protect you? - Nobody

Who will help you? - Nobody

We will show you - how!

e cellphone does not influence any function of the CPA system. ne CPA system is fully functional, even if the cellphone is

e cellphone serves only as a terminal display for possible

he messages from the CPA system to the cellphone are telephonems type. Therefore, no internet connection, app, cloud or similar requested. Neither your data can be collected or stored, because it does not appear in the internet.

# Desireable would be a kind of 'protection shield"

his is exactly what our research and development was aimed at · to create such a shield:

- permanent monitoring of the living enviroment
- immediate detection of danger
- immediate alert.

# The result of our work is called: CPA Cancer Protection Autosystem.

It includes the development of a **new artificial sense organ (bionics)** for fast Therefore this super-quard had to be created danger detection in combination with an **artificial intelligence system** to assess the sensor signal and includes a **real-time warning system** using **smartphone** alerting.

The CPA system is a worldwide new high-tech system with no comparable product existing

# The CPA system can protect ALL types of objects very effectively:

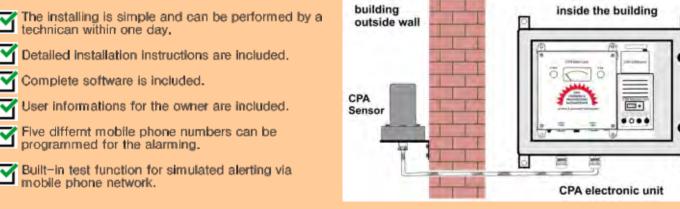

production facilities, museums, hotels, agriculture, clinics, cruise ships, etc. etc.

Built-in test function for simulated alerting via mobile phone network.

Such a person does not exist! And will never too!

And not just because of the lack of the special sense organ.

A super-guard was needed for that purpose! With a new sense organ!

The tasks are:

in form of a hi-tech system of bionics, cybernetics and artificial intelligence.

### Here "he" is:

### CPA CANCER PROTECTION AUTOSYSTEM

A worldwide new hi-tech scanning device - combines bionics, cybernetics and artificial intelligence, forming the requested super-guard

and transport box

a CAUSE!

Alpha and beta radiation = particle radiatio = high-energy particles with **approx. only** 

Gamma radiation = electromagnetic wave = no particles with very long range up to many kilometers

Gamma radiation has very long range but is rather harmless and can be used for the early detection of radionuclides at great

It is the **momentous confusion** of external radiation and incorporation of radionuclides. The deadly danger of cancer is **not** caused

by radiation - **but** by **unrecognizable**,

Because: there is **no** radiation **WITHOUT** 

radiation source! Radiation can not fly

around alone! But the radiation sources

(radionuclides) are exactly doing that!

radiating particles - so-called radionuclides!

These are the **producers** of radiation. The

radiation is always a CONSEQUENCE - no

Accordingly, there is a **huge difference** 

between radiation and radiation source in

terms of cancer risk to humans.

Radiation is **ALWAYS** generated by

highly active particles that enter the body with breathing air and food. integrated GSM module for alarming SMS to five different mobile phone The acute risk of cancer from radioactivity is numbers (programmable) at the same **NOT** the external radiation - the problem is the **RADIATION SOURCE!** 

Installation and scope of delivery: The CPA system can be easily installed by a technician within one day

 complete installation material complete installation instructions - complete software included

mobile phone provider

- user informations for the owner - high-quality protection- and transport box (metal) 800 x 600 x 600 mm
- CPA system ups uninterruptible power

Radiation is **harmless** - but the radiation source is **deadly!** Radionuclides **are** the radiation sources.

> These radionuclides can emit THREE types of radiation:

alpha radiation, beta radiation and gamma radiation:

1 m range

Gamma radiation is e.g. used in X-rays

approx. 10 X-rays from outer space. This On the other hand, alpha radiation and beta

and on an intercontinental flight the

passenger receives e.g. the radiation dose

radiation are highly dangerous particle radiation - i.e. material particles - which act like **high-energy projectiles**. Both have only very small ranges of a few meters in the air - **but:** 

The greatest ignorance is the greatest danger (would you have known it?)

However, if these enter the body with

breathing air or food and are deposited the organs, their range is sufficient to permanently bombard and destroy the surrounding cells and tissue structures ar thus cause cancer. Cancer in the body is NOT caused by external radiation, be

**Example: The madness of the Chernobyl** or Fukushima tourism:

by **incorporated** radionuclides.

People who visit these places get a Geige counter that shows the gamma radiation emanating from the ex-nuclear power plan block. This is about as high as a few X-rays,

But the incredible amount of radionuclides "lying around" and "flying aroun there and then being inhaled or ingested bring the deadly risk of cancer. These radionuclides are so small (atoms) that th are not kept away by any gas mask or DIY

but not very dangerous.

For us as physicists, it is incompreher sible how people voluntarily go there

Apparently people have no idea of the hug difference between external radiation and the highly dangerous radionuclides.

> The terrible consequences will only become visible after years, when the trip will longtime have been forgotten.

store respirator.
